Filters

Article 08/22/2023

Dashboard Designer provides users with the ability to select and visualize specific data based on their preferences or needs. These filters help personalize the user experience and facilitate data exploration.

The dReveal filters are crucial components of our reporting generation tool, designed to give end users the ability to customize and refine their data queries. These filters serve as user-friendly interfaces, allowing individuals to select specific criteria or values relevant to their analysis.

dReveal filters serve as interactive prompts for end-users, allowing them to select specific values. These selected values are then utilized by our powerful engine to perform various filtering operations and create conditions within the application.

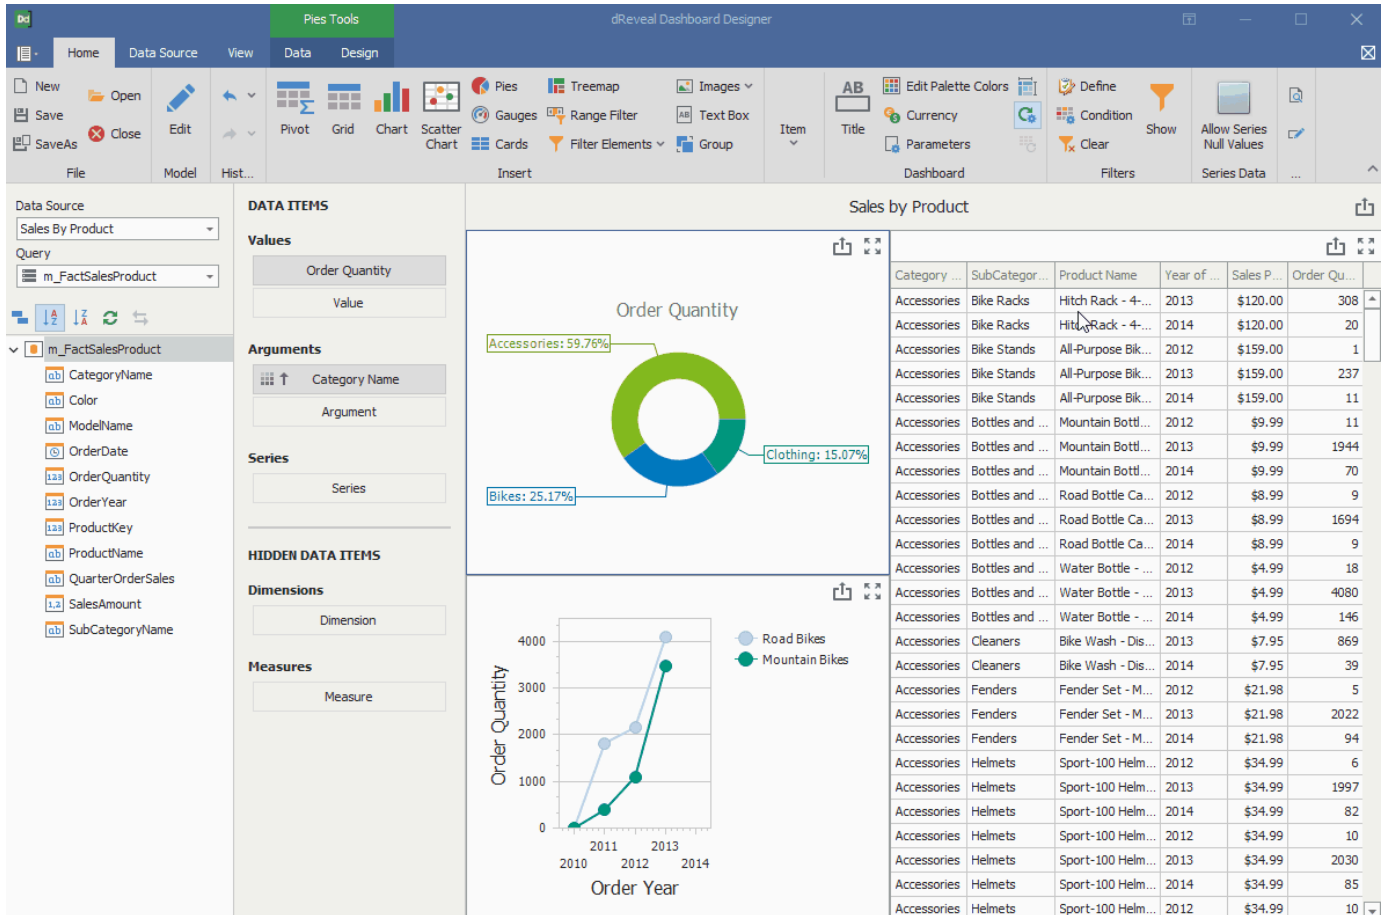

The screenshot displays the dReveal application interface. On the left, a sidebar contains navigation icons for Grid, Dashboard, Scheduler, and Document, along with user information: Administrator, English (United States). The main area shows a report titled 'Sales by Product'. A 'Filters' panel is open on the right, featuring two sections: 'General' and 'Dates'. The 'General' section includes a dropdown for 'Language Product Name' (set to 'English') and a dropdown for 'Sales Amount' (set to '<All>'). The 'Dates' section includes dropdowns for 'Year of Date' (set to '<All>') and 'Quarter of Date' (set to '<All>'), and a search field for 'Date of Sale'. A list of date ranges is visible below the search field, including 2010Q4, 2011Q1, 2011Q2, 2011Q3, 2011Q4, and 2012Q1. A 'Select All' link is also present.

Show

This option allows the user to apply filters to the report for a better visualization and understanding of specific data.

Steps to Select a Filter:

1. Open Dashboard Designer.
2. Create a new report or open an existing one.
3. Click on the "Show" icon.
4. Select a filter.
5. Click on the "Ok" button.

Clear

This option allows the user to clear the applied filters in the report to display all data in the report without any applied filters.

Steps to Clear the Applied Filter:

1. Apply some filters.
2. Click on the "Clear" icon.
3. Select a filter
4. Click on the "Yes" button.
